This is a must have book for your Maternal-Newborn nursing class. The chapters are broken down and detailed very well for the topic it is covering. There are tons of charts and bullet points that simplify the material. I bought this book used, came in very good condition. BONUS: The e-code on the inside cover had not been scratched off yet, so I set up the online account for the e-material. It has full a full e-book and audio playback for every chapter, there are tons of practice questions for each chapter, there are videos and animations to help you with the material. There are also flash cards which are very helpful as maternal-newborn nursing is different from other nursing classes, it has it's own terminology which does take some getting use to, these flash cards help learn the vocabulary/terms. Overall a good buy.

I needed this book for my nursing program. I rented on and I saved a lot of money. It's a pretty good book just like all the other nursing books. OB is not really for me so I am just trying to pass the class. The chapter summary and the quizzes at the end of the chapters definitely helped me on the

tests in class. If your nursing program uses this book , I think you should rent it from !

I loved this book. I came into nursing to become an L&D nurse. This book is such an easy read with great charts and its very explanatory when it comes to difficult concepts. The "critical components" within the chapters are very helpful and were def concepts our teacher used on the exams. Overall my favorite book in nursing. It wasn't a crazy bulky book like my med surg book and it was user friendly! Good luck nursing students!

Just as described

Easy read. Bought fairly new (unused access code) but used book. No msrk ups great quality accurate ship dates and easy read with interactive exams, flash cards, and lectures.

Easy to read and understand

Too bad about all the typos, otherwise it is a very well put together text that is very concise and accessible. The support site has most of the chapters in podcast form, which is great when you are too tired to stay focused.

If I could give this book 0 out of 5 stars I would. This book was chosen by the maternity nursing department and they didn't really read through this particular textbook. The worst book I've read in nursing school, no flow what so ever, and it's in bullet format which makes it impossible to read. There are multiple typos, no consistency in normal vital sign ranges. Just a bad bad book.
