Customer Reviews

Mercer Mayer is a writer and illustrator for Little Critter First Readers, as well as Little Critter Spectrum began writing and illustrating children's books in 1966 and since that time, he has published over 300 titles. Open almost any of the award-winning author/illustrator's books, and out may pop dragons, cuddly monsters, wonderful creatures, and endearing critters. "Most of my books are about things that happened to me when I was a little kid," says Mercer. "Now that I'm a big kid, I write about things that happen now, especially with my own children. They always help remind me of what it was like." Born in

Little Rock, Arkansas, Mercer Mayer spent his childhood hunting lizards and snakes in the swamps near his home. During his teenage years, he attended the Honolulu Academy of Arts. He later received additional training at the Art Students League in New York City. Upon completion of his studies, he set out with pen and ink to write and illustrate a collection of children's book, reflecting many of the adventures he experienced as a child. --This text refers to an alternate Paperback edition.

I purchased this book for my 5 year-old and at first, it seemed very appropriate. Addition, subtraction. Things that any 5-year-old should be learning. But then, it switched gears to simple comparisons (which item is larger? Which item is higher? etc.). It was a total waste of time after the first half of the book.

My daughter loves workbooks. She is five years old. There were some sections in this book that were a little too easy for a child her age, but it was good review. And, of course, she didn't mind that a few pages were really easy for her. It covers a lot of material, but only spends a couple pages for each topic. It's not too in depth but it gets the gears going and gets them thinking. The thing I liked most was that the activities were different...Each page had a different activity. Sometimes she had to color things, sometimes she had to draw, sometimes it was tracing numbers, etc. The activities/pictures were big and clear so she didn't get confused much, even on sections that she hasn't learned yet, like telling time or counting money. My only complaint is I wish it were longer. It was definitely a good price, though, and worth it! I would definitely recommend this workbook to any parents of kids ages 3-6.

I purchased this for my five year old (homeschooled). The concepts were pretty self explanatory. She blows through the work since each pages usually only contains a few problems. I do wish that there was a little more review or assessment at the end of each unit. This book would be ideal more for a beginning of the year kindergartener versus an end of the year one. Overall, I'm content with the book, but it isn't going to last her very long.

This would be a great home school curriculum if anyone is looking for one. I used the first part of the book to give my daughter a jump start on her Kindergarten year. I am glad that I did. I will use the book to supplant her schools curriculum which is actually Abeka but this will work well with that curriculum

Very nice math book for Kindergarten. Clean copy. Shipped promptly

Good start, wish it was thicker! My 4 year old son even commented, "It doesn't have very many pages." Too much money for size of book.

I use these books as a supplement for my kindergartners homeschool curriculum. I think they are a great resource for supplemental material. I don't know if I would recommend them for primary material.

Wonderful book for supplementing students work either at school or with a home school curriculum. Use it as extra practice or as a independent work to see exactly where my students are.
