Children's Books “Grandpa, How Do Ships, Float?” (Popular Science For Children Ages 4-8, Books “Grandpa, How Do Things Work?” Series Book 3)

Synopsis

This Popular Science for Young children, series books were written after endless hours of happiness joy and endless curious questions of "What's that?", "How?" and "Why?". These questions are cardinal questions that young children and scientists have asked since the creation of man. This book about "Floating Bodies" is the Third book in this collection which was written with the intention of helping my young grandchildren understand "How great ships made of iron, loaded with large containers, can float while they sink like a stone in the swimming pool?" This is a story that takes us back to early times; to the days of the ancient Rome and its wars against the ancient Greek city-states. The story is about the great scientist Archimedes of Syracuse. One day, while taking a bath, an important discovery made Archimedes very excited. He was so excited that he jumped out from his bath and forgot to put on his clothes. He ran naked along the streets of his city, Syracuse, and shouted all the way home "Eureka! Eureka!", a word in ancient Greek which means, "I have found it! I have found it!" The word, eureka, is still used today by someone making a surprising discovery. Entries mentioned in this book, to my grandchildren, about the entries, as follow: - Archimedes of Syracuse; The Claw; The Catapult; Robotriks; Regularly shaped body; Finding the volume of an object with an Irregular Shape; Buoyancy Principle of Floating Bodies; Swim Bladder Aircraft carrier. And more.

Customer Reviews

I bought this book for both my boys about a week ago, mainly for the older one. But it is the younger one who loves it. We read it probably 4 times, almost every day. It gives a fairly good basic of science for young children. The 3 year old already knows the names of Archimedes's War Machines in here and what they are, what makes them unique. "The Claw was a good Robotrik Transformers Cybertron that helps the defenders to protect the sea walls of the city".A wonderful way to open up a world of science for any kids.

This book is great. I considered myself knowledgeable on ships until I read this. I had no idea about the implementing Archimedes Catapult invention in our most modern Aircraft Carrier. That is just one of the things, I as an adult learned from this book. This book is written perfectly to read with younger children, or for that pre-teen to read on their own. It has wonderful pictures and great online puzzle at the end. I will be buying this series for my niece and nephew. The book Recommended to all families who are looking for a valuable book with a lot of information for the children!

I absolutely LOVED the remarkable photographs and the history lesson. I learned something new. However I must inquire... is the boy in high school or something? No child I know talks that way. They are kids not physicists. Maybe Sheldon and Leonard (Big Bang Theory) talked like that when they were young. You need to write for your targeted audience. Otherwise, I sure enjoyed it!

! I got it for my 9 year old, she likes it very much. She thinks it's a very interesting book. I read it too, didn't know most of it! We also learned about lots of little simple things in which we didn't know how and why; recommended to all parents and grandparents in case they are looking for a good educational book for the kids. It starts some fun dialogue as a family as well! Lots of fun questions and answers kids' definitely would ask. Great pictures as well

I bought my grandson the "Grandpa how do ships float?" eBook for his Kindle-Fire and he loved it! I've bought him many books, but I had never saw him having so such excitement from other books.

Every time I come to visit him, he makes me sit on the couch with him while he points feverishly to some new detail he found in the book. I don't know what magic makes children love certain books, but I know this one has it. Great buy, highly recommended.

This book is fascinating for kids and the adults who help them. It explains a variety of scientific concepts in a way that is fun and easy to follow. Fun and easy reading with practical and simple information. My daughter is 7 years old and she is very into science and the way things work. Fun and educational, I highly recommend for people with young children/grandchildren.

I bought the book for my grandson. I love to read the book with him. The book contains some scientific subjects, written in an interesting way, With lots of pictures illustrating what explained.

My sons loved the book very much. They asked me to read it again and again. The puzzle gift was wonderful gift to them. Recommended book. Jojo
