At Speedy Publishing, we envision our company and publishing arm as being a premier publisher of quick-reference materials, useful reference books, fiction books in all sub-genres and creative non-fiction to both entertain and assist readers worldwide in reading a fun and exciting books and also accomplishing their educational and professional goals. We continually update our products, ensuring accuracy of information, making sure they are fun and entertaining. Our products are always available in whatever format our readers need.

This book about the Australian Outback really has awesome pictures in it. Very high quality pictures, some of them will just take your breath away. After looking and reading this book about Australia, people of all ages will probably want to go on a trip there. I've always wanted to travel to Australia, because of back pain I can't sit that long to travel. Ever since I was young, I've had an interest in Australia. Probably because my Grandparents and a few other people I know, have been there and have said how Wonderful it is. The book was interesting and educational. One of the things I found out was about the Kakadu National Park, it has over 280 bird species which is about 1/3 of the birds in all of Australia. I was hoping for a picture of some of the birds. The book had a nice picture of

Kakadu National Park, but No Birds. Another interesting thing I read about in this book, was about the Nullarbor Plain, there they have up to 100,000 wild camels! These camels were used to build railroads. The camels were then abandoned after they were done using them. That sounds so sad. In the Australia Outback book, there was a cool picture of a cave like dwelling, called a Dugout, that people actually live in! In the town of Coober Pedy, people living there do that to stay out of the "Scorching Heat". I didn't know, until I read this book, that the Outback takes up the most area in Australia. I also learned that in the Outback, that there are plenty of flat lands, as well as rock formations, and at least one mountain range. To me it looks like mostly dry plains. That kind of surprised me, I thought Australia was greener than that. The book, Let's Explore The Australian Outback is interesting, educational and fun. This is a book I'd want to pick up and look through more than just once.** Disclaimer I received this product for free in exchange for my honest review here.** I hope my review helped in some way.

This is a great high quality book. I was given the download free of charge so that I could read it and leave a review. The books in this line of educational products are phenomenal. They contain beautiful pictures of the subject of the book. The download is available via the Kindle app to view on all your electronic devices. It works well on my android table. It is not compatible with my basic Kindle reader so that's something to be aware of. The publisher has listed a large number of educational books to download and view. The download is a sampling of what is in the printed book. It's nice to be able to check the book out before buying it. This book explores the beautiful Australian Outback. It is very informative. It goes over all the regions of the outback and what is unique about each area. The pictures relate to the information well and help give a visual reminder of the different areas covered. The pictures of the rock formations, the plains, and the treeless areas will help a child remember the information they have read.. Third graders would find this book enjoyable . I don't feel younger children would be able to enjoy it as much. It goes hand in hand with third grade curriculum and can supplement what the child is learning in school. For home school kids, it gives some varied in their lesson plans as well. I hope this review has been helpful to you. Download the book and give it a try! I think you will be pleased with it

This a very short book with a number of pictures of places in the Outback. Some of the descriptions could definitely be more interesting. Coober Pedy is not just a place where people built underground places to live. It is and was the opal mining center of Australia. You can visit opal mines and spend the night underground in one of these places. I did this on a trip to the Outback in 2009. I

am really glad I had also included a trip to an animal preserve near Sydney because I would never have seen a "live" kangaroo otherwise. For two days we drove from Alice Springs to Adelaide passing a car or truck coming from the opposite direction about every 45 minutes. Along the side of the road were a number of dead kangaroos. With a great amount of time between cars/trucks passing on the road they had to be very slow or just unlucky, I guess. The pictures of the Flinders Mountains look about as I saw them. A famous concert was held there on two separate occasions. During the Australian Bi-centennial in 1988 there was "Opera in the Outback" which was a great achievement when you consider about a dozen people actually live where it was staged. All of the passenger train cars in Australia were brought to that area full of concert goers to see and hear Dame Kiri Te Kanawa. There were also horse races the next day. Thousands of people arrived on the train and by camper/caravan. This was repeated in 1997 and recorded. This performance with some beautiful scenery of the area is available on as Opera in the Outback. It is not entirely opera. This is an ok book to show kids some pictures of the Outback but does not really give you information worth having and does not show any of the experience of being there.....like the huge flies in your face! I received this book free in exchange for my honest review.
