This is a must have to go along with the textbook. In this book you'll come across "Multiplication of Matrices".....I'll be honest, when I was in high school I didn't get this far so after I recovered from having my eyes bug out from seeing this lesson in the textbook, with the help of the example in the workbook, I was able to explain, demonstrate, and help my child understand how to solve the problems in this lesson. I really appreciate the writer of these textbooks for making some difficult concepts easier to understand. Thank you!

Extremely poor quality paper! I have the 2005 edition which has a durable cover and high quality white pages. Thought I was ordering the same product. New edition uses thin newsprint paper. Will not make great copies as you can see through to the other side. Paper will tear easily if erased. Overall very poor quality book for \$25. But... I need the book for a student and so I am forced to keep it.

Great for SpEd.

Helpful material for Geometry review!

This workbook is designed to be used with the AGS Geometry book. It does a good job of matching problems to concepts and is "cross-referenced" to the student lessons. Students are able to work with this well, and I am happy that I purchased this.

This workbook was received unmarked and in great condition. Great purchase for a fraction of the cost of a new book.

Needed extra copies for my class.

This workbook is a great resource for me in my classroom. Thank you so much. It reviews important information from each lesson in the activity pages.
