European Neogene Mammal Chronology (Nato Science Series A:)

Synopsis

During the last 20 years great progress has been achieved in our understanding of both earth history and vertebrate evolution. The result is that climatic/tectonic events in earth history can now be placed in a more precise and global time frame, that permit their evaluation as abiotic causal factors which might trigger extinction and dispersal events in vertebrate history. Great strides have also been made in genetics and cell biology, providing new insight into phylogenetic relationships among many vertebrates. These new data, along with data on chronologic resolution of earth history, provide tests of previous interpretations regarding ancestral-descendant relationships based solely on the fossil record. It is fitting and proper that a volume on European Neogene mammal chronology is produced at this time, to ensure that new interpretations of vertebrate evolution and chronology are based on the most accurate and current data. Vertebrate paleontologists believe that the fossil record is the only secure data for measuring the actual course and tempo of vertebrate evolution. Knowledge of the fossil record must keep pace with advances in other areas of science so that inferences on vertebrate evolution are accurate and meaningful.

Book Information

Series: Nato Science Series A: (Book 180)

Hardcover: 658 pages

Publisher: Springer; 1989 edition (June 30, 1990)

Language: English

ISBN-10: 0306433915

ISBN-13: 978-0306433917

Product Dimensions: 7 x 1.5 x 10 inches

Shipping Weight: 2.9 pounds (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #8,724,121 in Books (See Top 100 in Books) #56 in Books > Science & Math > Biological Sciences > Paleontology > Paleozoology #1281 in Books > Science & Math > Biological Sciences > Animals > Fossils #7856 in Books > Textbooks > Social Sciences > Archaeology
