Biology: Concepts And Investigations

Synopsis

MariÏfÏlle Hoefnagels' passion as a classroom instructor is evident in *Biology: Concepts and Investigations*, an introductory biology textbook written to explain the general concepts of biology at a level of detail that allows students to understand concepts rather than memorize details. New media integration icons, upgraded PowerPoint presentations, new tutorial animations based on textbook art, upgraded Connect question banks, and adaptive technologies like LearnSmart and SmartBook capitalize on the power of technology to enhance student understanding. Key goals of the book are to: help the student connect the concepts in the book to their everyday lives; show connections between ideas within the chapter and to material they have already studied; teach introductory students how to be more active learners.

She also maintains a blog on teaching nonmajors biology, and she frequently gives presentations on study skills and related topics to student groups across campus.

Exactly what we expected. What can I say you can't get too excited about a Biology book lol

Fast shipping and just what I needed for class. It wasn't all beat up like the books I receive from chegg sometimes and I would much rather rent a book than buy a 500 dollar one.

Only reason this book gets 1 star is because the information is poorly organized and introduces too many topics at once. It's hard to follow with and it implies knowledge rather than tells the reader what they need to know. Bad book for an introductory biology class.

Great condition! We saved a lot of money and this book was exactly what my son needed!

It's so easy to understand! Complicated processes at the molecular level are broken down with beautiful, clear diagrams. I have made an A on every test this semester so far.

Didn't realize until halfway through the semester it was a shortened version. Otherwise great book

The binding was a little "jacked up", but it still reads like the \$130 version.

Learn about the birds and the bee's...and human reproduction!
